

concrete & masonry construction products

hanley wood

JULY / AUGUST 2004

BROUGHT TO YOU BY THE EDITORS OF CONCRETE CONSTRUCTION & MASONRY CONSTRUCTION

wheelbarrows

ALTIM INC.

The Accu-chute wheelbarrow gives users a high degree of accuracy and control in pouring. The pour spout at the front of the product lets you place the load exact-

ly where you want it, with much less loss and cleanup. It features a thick pan for enhanced stability and long life. The thick steel frame lets users carry heavy loads, and an autophoretic coating gives it excellent corrosion and chemical resistant, making the steel parts last longer. Also, the premium fasteners won't pull through the pan. Other features include thick, 60-inch wood handles and multiple tire options. 888-962-5846.

telehandlers

BOBCAT CO.

The company announces two additions to its VersaHandler line of telehandlers. The models feature increased lift capacity and a compact size. The wheelbase on the new V723 and V723 FL is four inches longer than previous models, giving each machine a rated load capacity of 7000 pounds. Both of the machines feature a maximum lift height of 23 feet. The cooling system has been enhanced with smaller holes in the cover screen (preventing debris from entering), and the one-piece radiator/oil cooler increases the system's efficiency. In addition, they use liquid-cooled, Tier II-compliant Perkins engines. The handlers have heavy-duty

lift trucks

HYSTER CO.

The H135-155XL₂ lift trucks have pneumatic tires and come in two capacities: 13,500 and 15,500 pounds. Equipped with cast ductile iron steer axles, each of the trucks has optimal maneuverability and reduced maintenance requirements. The single-reduction drive axles increase strength and durability by distributing the

truck load evenly across the axle housing, rather than the shafts. An optional seat has a full range of adjustments to fit the operator's physique, and the semi-suspension seat cushions the ride. Other features include low-mounted, full-length running boards; five-position steering column; sharp, clean analog gauges; ergonomic design; and a thick hood liner that muffles noise for maximum operator comfort. 252-931-5100. www.hyster.com.

filters

BALDWIN FILTERS

InterBlend is a high-performance filtration media formed with cellulose and multi-layered, melt-blown polyester/synthetic fibers. The combination uses the strength of each material to increase contaminant removal efficiency and dirt-holding capacity. The fibers are layered, then adhered to a cellulose base sheet for structural integrity. The composite layers allow for efficient contaminant removal and minimized flow

tal conditions. 414-259-5333.

hoists

HEIL ENVIRONMENTAL INDUSTRIES LTD.

The 1520 scissor hoist enables users to convert flatbed trucks into dump models. It is effective on two-axle trucks from 10,000 to 30,000 pounds. A double-acting electric power unit is standard, or it can be ordered for a direct-mount pump application. A 5-inch cylinder (providing 20-inch strokes) provides the force to lift the body to the desired angle for efficient

load delivery. The hoist mounts quickly and easily, and it provides long life and durable performance. 800-255-4345. www.heil.com. Circle 90.

HI-TECH HOIST INC.

The company's Patriot portable material hoists come with capacities of 850, 1000,

and 2000 pounds. The hoists are constructed of heavy-duty, high-quality steel for strength and durability. The hoists offer
